

Figure 1.--Areal extent of the Hartselle Sandstone and outline of the study area.

other researchers who in the future will perform additional studies designed to evaluate this resource and its economic potential.

The scope of this work included the collection and review of all previously published reports and also data provided as a courtesy by private companies and, heretofore, not available to the public. This present study also incorporated additional data available in the files of the Geological Survey of Alabama and the Alabama State Oil and Gas Board, particularly those data provided by sample cuttings and descriptions, cores and core analyses, and geophysical wire-line logs of wells.

### ACKNOWLEDGMENTS

Appreciation is expressed to the Alabama Department of Economic and Community Affairs, Energy Division, for providing partial funding for this study.

In an earlier study by the Geological Survey of Alabama and in the resulting report submitted to the U.S. Department of the Interior, Bureau of Mines (Chaffin and others, 1975), Cities Service Oil Company, Shell Oil Company, and Tenneco Oil Company granted permission to use information from
